### 1 DESCRIPTION

To develop the aviation mobile application (App) to access or display aeronautical meteorological information. The app facilitates the paid portal and allow users to register.

### 2 INTRODUCTION

The South African Weather Service (SAWS) is a public entity of the Department of Forestry, Fisheries and the Environment (DFFE) and derives its mandate from the South African Weather Service Act (No 8 of 2001 as amended). The public entity is listed as a Schedule 3A Public Entity in terms of the Public Finance Management Act (PFMA).

SAWS is tasked with providing timely and accurate scientific data in the field of meteorology to the broader South African society: a combination of both public good and commercial services. The organisation plays a vital role in South African public life, not just as a provider of key services, but also in empowering citizens to adapt the effects of the ever-changing weather.

### 3 BACKGROUND

SAWS has a range of products and services that are targeted for different market users for different industries. One of the key aspect these services require is the identification and the development of digital channels to disseminate services to the end users. Aeronautical meteorological (MET) information is no exception in providing such dynamic and smart ways for users to interact with services.

Currently SAWS provides the aviation website for Aviation stakeholders consisting of airlines, aircraft/airport operators, General Aviation, South African Civil Aviation Authority (SACAA), Air Traffic and Navigation Services (ATNS) and registered pilots. The website provides access to aviation users at no cost as the website is funded through cost recovery from regulated services.

The rapid advancement of technology has resulted in the emergence of mobile apps to access weather information in the most dynamic and convenient way. SAWS web survey, conducted among users, shows a strong need for an App as a supplement to the current SAWS aviation website.

### 4 REQUIREMENT / SCOPE OF WORK

- 4.1 The aviation mobile app is to be developed as a commercial product, supplementing the current SAWS aviation website. This means that the app will be developed using the aviation website as a reference or platform, with similar features referred to Output required below.

## Template: Specification for procurement above R500k up to R1m - Annexure H

The app will provide a one stop shop for the users providing paid service.

- The aviation mobile app will be a paid service.
- Will be open for anyone who want to register and pay for the service.
- Products that are freely available on the website will be freely available with the advertisement on the app.

### 4.2 Business Area Scope

- An Advisory Committee on Aviation Meteorological Service (ACAMS) member representing airlines, informed SAWS in February 2019 that pilots are using apps to obtain MET information as supplement to the information they get from their dispatch office that compiles MET flight documentation from SAWS Aviation website.
- Current apps where pilots get information from are often by 3rd party developers that do not provide aviation specific data or obtain it from unreliable sources.
- The main aviation website is too resource intensive for convenient use on a smartphone.
- The data is often scattered over various apps and therefore the need to have a one-stop app that is specific to aviation MET data for South Africa.
- Also required is some form of integration with products and services from other aviation service providers like Notification for Airmen (NOTAM) bulletins from ATNS.
- The aviation website is very popular and attract a lot of users, hence the availability of the App will enhance the use of aviation website.
- Training will be needed for SAWS personnel (relevant technical).

The App must support all functionality and products of the Aviation website, listed below.
