Specifications / Terms of Reference for bids

(For procurement above R500 000-00)

#### 1 DESCRIPTION

This bid calls for competitive bids for the Maintenance of Weather Radars for a period of three (3) Years. The appointed service provider will be expected to assist with preventative and corrective maintenance on all of South African Weather Service (SAWS) weather radars.

#### 2 INTRODUCTION

The South African Weather Service (SAWS) is a public entity of the Department of Forestry, Fisheries and the Environment (DFFE) and derives its mandate from the South African Weather Service Act (No 8 of 2001 as amended). The public entity is listed as a Schedule 3A Public Entity in terms of the Public Finance Management Act (PFMA).

SAWS is tasked with providing timely and accurate scientific data in the field of meteorology to the broader South African society: a combination of both public good and commercial services. The organisation plays a vital role in South African public life, not just as a provider of key services, but also in empowering citizens to adapt the effects of the ever-changing weather.

#### 3 BACKGROUND

SAWS operates a network of twelve (12) permanent installation weather radar systems nationwide, grouped into two categories. Most of the radars are the S band type, operating in the following sites: Bloemfontein, Ottosdal, Bethlehem, Durban, Polokwane, East London, Mthatha, Irene and Ermelo. Three C Band Radars are operated in Skukuza, Cape town and De-Aar.

The second category, the C-band radars were manufactured in the late 70's and 80's, whilst the S-Band Radars which were manufactured in 2005 have been installed at their respective sites since 2008. Maintenance requirements of these weather radar systems have gradually increased with age as time progresses, SAWS seek to invite competitive bids for the Maintenance of Weather Radars and their Ancillary Equipment (diesel generators, UPS, AVRS, Air-Cons etc.) for a Period of Three (3) Years.

#### 4 REQUIREMENT / SCOPE OF WORK

The purpose of the radar maintenance process is to sustain the capability of a system to provide a service. This process monitors the system's capability to deliver services, records problems for analysis, takes corrective, adaptive, perfective, and preventive actions, and confirms restored capability. This maximizing system availability to meet the operational requirements and preserving system operating potential through proper planning of system scheduled maintenance, thereby extending the mean time between corrective maintenance, as well as enhancing the availability of the system.
